## Lab B Bonus Homework

A Sampling

## Problem B. bonus

- random variable $Y=k^{*} X^{*} X$, where $k$ is a constant.
- This shows properties similar to the function of random variable in $B 5$. In this case, the function is $g(x)=k^{*} x^{\wedge} 2$ instead of sigmoid transformation.
- $X \sim$ Uniform $(0,1)$ from rand in MatLab

$$
\mathrm{K}=1

## Bonus Homework Problem

- How does log of a random number A look in histogram.
- And as the number of trials increase, what kind of shape does that form?

## A = randn(10,1); $F=\log (A)$;

## A = randn(100,1); $F=\log (A)$;

## $A=\operatorname{randn}(1000,1) ;$ $F=\log (A)$;

$\mathrm{A}=\operatorname{randn}(10000,1) ;$
$F=\log (A)$;

## In conclusion...

- As the number of the trials increase, the histogram forms bell shape and from the histogram we can extrapolate the mean to be zero.
