Reject  $H_0$ Reject  $H_0$ Reject  $H_0$ Critical  $\mu = 22$  Critical  $\mu = 22.015$  value of  $\overline{x}$  ( $H_0$ ) value of  $\overline{x}$  ( $H_a$ )

**FIGURE 6.19** The two error probabilities for Example 6.32. The probability of a Type I error (yellow area) is the probability of rejecting  $H_0$ :  $\mu=22$  when in fact  $\mu=22$ . The probability of a Type II error (blue area) is the probability of accepting  $H_0$  when in fact  $\mu=22.015$ .

## **TYPE I AND TYPE II ERRORS**

If we reject  $H_0$  (accept  $H_a$ ) when in fact  $H_0$  is true, this is a **Type I error**. If we accept  $H_0$  (reject  $H_a$ ) when in fact  $H_a$  is true, this is a **Type II error**.

Truth about the population

	2.0	$H_0$ true	$H_a$ true
Decision based on sample	Reject H <sub>0</sub>	Type I error	Correct decision
	Accept $H_0$	Correct decision	Type II error

FIGURE 6.17 The two types of error in testing hypotheses.

Truth about the lot

		Does meet standards	Does not meet standards
Decision based on sample	Reject the lot	Type I error	Correct decision
	Accept the lot	Correct decision	Type II error

**FIGURE 6.18** The two types of error in the acceptance sampling setting.

## **POWER AND TYPE II ERROR**

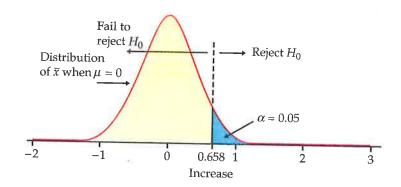

The power of a fixed level test to detect a particular alternative is 1 minus the probability of a Type II error for that alternative.

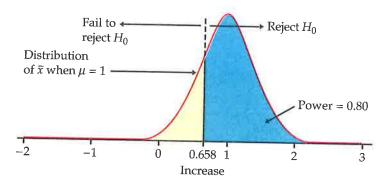

## SIGNIFICANCE AND TYPE I ERROR

The significance level  $\alpha$  of any fixed level test is the probability of a Type I error. That is,  $\alpha$  is the probability that the test will reject the null hypothesis  $H_0$  when  $H_0$  is in fact true.

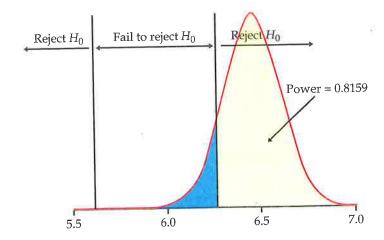

## **POWER**

The probability that a fixed level  $\alpha$  significance test will reject  $H_0$  when a particular alternative value of the parameter is true is called the **power** of the test to detect that alternative.

**FIGURE 6.15** The sampling distributions of  $\overline{x}$  when  $\mu=0$  and when  $\mu=1$ . The power is the probability that the test rejects  $H_0$  when the alternative is true.

**FIGURE 6.16** The power for Example 6.30. Unlike Figure 6.15, only the sampling distribution under the alterntive is shown.
